Fungal xylanase prepns. construct for producing for use as animal feed additives recombinant Thermomyces xylanase and DNA

Claim Page 45-46; 69pp; English.

This sequence represents the xylanase from Thermomyces lanuginosus strain DSM 4109. This xylanase, and xylanases derived from Humicola, Thermoascus, Chaetomium, Mucor, Talaromyces, Malbranchea, Myceliophthora, Thielavia, Byssochlamus or Paecilomyces strains can be used in the monocomponent xylanase preparations of the invention. The xylanase preparations and the recombinant Thermomyces xylanase are useful as animal feed additives, which promote in-vivo breakdown of plant cell wall material and thus improve digestibility, growth rate and/or feed conversion hea, Myceliophthora,
e used in the
The xylanase
are useful as
of plant cell wall
und/or feed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
            The sequence represents an endo-1,4-beta-D-xylanase from Thermomyces lanuginosus (Humicola lanuginosa), which may be used as a breadimproving additive. The enzyme may be expressed recombinantly from a plasmid pYES2.0 vector in Saccharomyces cerevisiae DSM 10133 (claimed), and may be added to flour at 5-5,000 (preferably 20-2,000) FXU/kg flour, optionally along with other enzymes (amylase, maltogenase, lipase, cellulase, hemicellulase, pentosanase, glucose- oxidase, laccase, protease and/or peroxidase). The enzyme combines particularly well with amylolytic enzymes, and may be used to improve baking properties of flour and/or dough, by increasing volume and improving texture, flavour, crumb softness, freshness and anti-staling properties, while improving dough machinability and stability. (Updated on 16-OCT-2003 to standardise OS

                The present sequence is the protein sequence of a thermostable xylanase of Thermomyces lanuginosus. The xylanase has a melting temperature (Tm) of 75.0 degrees C at pH 7.0. It is preferred for use in a claimed composition of the invention, which comprises at least 2 thermostable enzymes selected from an endoglucanase, xylanase, phytase, protease, galactanase, mannanase, dextranase and alpha-galactosidase. The composition is useful for improving the nutritional value of animal feeds, especially those containing soya, wheat, barley, oats and/or rye
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence

                                                                        The invention relates to a process for preparing a mash (A) (having enhanced filterability and/or improved extract yield after filtration) which comprises preparing a mash in the presence of enzyme activities (comprising a xylanase of GH family 10 at at least 15% w/w of the total xylanase and endoglucanase enzyme protein) and filtering (A) to obtain a wort. Also described is a composition is useful for reducing the viscosity of an aqueous solution comprising a starch hydrolysate, which is a mash for beer making or a feed composition. The process is useful for the production of an alcoholic beverage, such as beer or whiskey and the composition is useful in the mashing and filtration step in brewing process. The present sequence represents a xylanase used in the mashing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Preparation of a mash (having enhanced filterability and/or improved extract yield after filtration) comprises preparing a mash in the presence of enzyme activities comprising xylanase of GH family 10 and filtering to obtain wort.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence

                                              The present invention relates to a modified xylanase exhibiting inc thermostability and alkalophilicity. Modified xylanase is useful in industrial process such as pulp manufacturing. Modified xylanase is useful for bleaching of pulp, processing of precision devices and improving digestibility of poultry and swine feed. Modified xylanase improved performance at conditions of high temperature and pH and exhibits improved thermophilicity and/or alkalophilicity in compari corresponding native xylanase. The present sequence is Thermomyces lanuginosus xylanase, Xyn
                                                                                                                                                                                                                                                                                                                                                                Modified xylanase exhibiting increased thermostability alkalophilicity useful for industrial processing e.g. 1 manufacturing.

The XA proteins comprise an amino acid sequence less than 97% identical to a naturally occurring Bacillus circulans xylanase. They are modified to exhibit enhanced thermophilicity, alkalophilicity or thermostability relative the naturally occurring B. circulans xylanase. They may be used as the active compound in a bleaching agent which is used for bleaching pulp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Non naturally occurring XA protein with enhanced thermophilicity, alkalophilicity or thermostability relative to the naturally occurring Bacillus circulans xylanase is used in an agent for bleaching pulp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Thermomyces
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           05-MAR-2001

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                  The present invention relates to a non-naturally occurring xylanase activity (XA) protein comprising an amino acid sequence less than 97% conditions to a naturally occurring Bacillus circulans xylanase, where the protein has been modified to exhibit enhanced thermophilicity, conting a circulans xylanase, and has at least 5 amino acid substitutions. A circulans xylanase, and has at least 5 amino acid substitutions. A conditions in the bioconversion of lignocellulosic materials to fuels, for clarifying juice and wine, extracting coffee, plant oils and starch, producing food thickeners, altering texture in bakery products, e.g. improving the quality of dough, helping bread to rise and processing of wheat and corn for starch production, use as animal food additives to aid covices and semiconductors. The present sequence is a xylanase protein conduction of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          T lanuginosus

                                                                                                                                                  xylanase from Bacillus circulans) protein appearing as ADI66730. Also included is a bleaching agent comprising the XA protein. The non-naturally occurring XA protein comprises at least four amino acid substitutions as compared to Bacillus circulans xylanase ADI66728. The amino acid substitutions are made at positions 26, 28, 30, 53, 58, 64, 79, 105, 142, 144, 171, 176, 180 or 182, especially at positions 28, 30 or 144. The non-naturally occurring xylanase activity (XA) protein useful for bleaching pulp in the paper and related industries, but is also useful in the food and animal feed industries. The new protein is active at higher pH and temperature ranges than naturally occurring xylanases, simplifying incorporation of the xylanase treatment step pulp processing, especially where the enzyme is added after hot alkali treatment. The present sequence is a xylanase from another species included for comparison
                                                                                                                                                                                                                                                                                                                                  The invention relates to a mutant xylanase activity (XA, xylanase from Bacillus circulans) protein appearing as A
                                                                                                                                                                                                                                                                                                                                                                                                        New mutant xylanase (XA) protein comprising at least four amino aci substitutions as compared to Bacillus circulans xylanase, useful for bleaching (paper) pulp, and in the food and animal feed industries.
                                                                                                                                                                                                                                                                                                                                                                              Disclosure; SEQ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          12-MAY-1999;

                                                                                                                                                                                                                                         The present sequence is given in a specification relating to non naturally occurring xylanase activity (XA) proteins. The XA proteins comprise an amino acid sequence less than 97% identical to a naturally occurring Bacillus circulans xylanase. They are modified to exhibit enhanced thermophilicity, alkalophilicity or thermostability relative the naturally occurring B. circulans xylanase. They may be used as the active compound in a bleaching agent which is used for bleaching pulp

                                                                                                                                                                 र्
                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a non-naturally occurring xylanase cc activity (XA) protein comprising an amino acid sequence less than 97% cc identical to a naturally occurring Bacillus circulans xylanase, where the protein has been modified to exhibit enhanced thermophilicity, cc alkalophilicity, or thermostability relative to naturally occurring B. cc circulans xylanase, and has at least 5 amino acid substitutions. A complete the bioconversion of lignocellulosic materials to fuels, for clarifying juice and wine, extracting coffee, plant oils and starch, producing food thickeners, altering texture in bakery products, e.g. improving the quality of dough, helping bread to rise and processing of cc wheat and corn for starch production, use as animal food additives to aid corn the digestibility of feedstuffs and in the washing of super precision cc described in the exemplification of the invention
                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Non naturally occurring XA protein with enhanced thermophilicity, alkalophilicity or thermostability relative to the naturally occurring Bacillus circulans xylanase is used in an agent for bleaching pulp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is given in a specification relating to non naturally occurring xylanase activity (XA) proteins. The XA proteins comprise an amino acid sequence less than 97% identical to a naturally occurring Bacillus circulans xylanase. They are modified to exhibit enhanced thermophilicity, alkalophilicity or thermostability relative to the naturally occurring B. circulans xylanase. They may be used as the active compound in a bleaching agent which is used for bleaching pulp
                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disclosure;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S
                                                                                                                                                                                                                                                                                                                                                                                                                                               identical to a naturally occurring Bacillus circulans xylanase, where the protein has been modified to exhibit enhanced thermophilicity, alkalophilicity, or thermostability relative to naturally occurring B. Circulans xylanase, and has at least 5 amino acid substitutions. A Circulans xylanase, and has at least 5 amino acid substitutions. A Cipulp, in the bioconversion of lignocellulosic materials to fuels, for Cipulp, in the bioconversion of lignocellulosic materials to fuels, for Ciproducing juice and wine, extracting coffee, plant oils and starch, producing food thickeners, altering texture in bakery products, e.g. Cimproving the quality of dough, helping bread to rise and processing of wheat and corn for starch production, use as animal food additives to aid to the digestibility of feedstuffs and in the washing of super precision Ciproductors and semiconductors. The present sequence is a xylanase protein described in the exemplification of the invention
                                                                                                                                                                                                                                                                                                Best Loc

                                                                                                                                                                                                                                                                                                                                                                                      xylanase from Bacillus circulans) protein appearing as ADI66730. Also included is a bleaching agent comprising the XA protein. The non-naturally occurring XA protein comprises at least four amino acid substitutions as compared to Bacillus circulans xylanase ADI66728. The amino acid substitutions are made at positions 26, 28, 30, 53, 58, 64, 79, 105, 142, 144, 171, 176, 180 or 182, especially at positions 28, 30 standard for bleaching pulp in the paper and related industries, but is also useful in the food and animal feed industries. The new protein is active at higher pH and temperature ranges than naturally occurring xylanases, simplifying incorporation of the xylanase treatment step intreatment. The prescribly where the enzyme is added after hot alkali treatment. The prescrib sequence is a xylanase from another species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  12-MAY-1999;

                                                                                                                                                                                                               The invention relates to a process for preparing a mash (A) (having enhanced filterability and/or improved extract yield after filtration) which comprises preparing a mash in the presence of enzyme activities (comprising a xylanase of GH family 10 at at least 15% w/w of the total xylanase and endoglucanase enzyme protein) and filtering (A) to obtain a wort. Also described is a composition is useful for reducing the viscosity of an aqueous solution comprising a starch hydrolysate, which is a mash for beer making or a feed composition. The process is useful for the production of an alcoholic beverage, such as beer or whiskey and the composition is useful in the mashing and filtration step in brewing process. The present sequence represents a xylanase used in the mashing
                                                                                                                                                                                                                                                                                                                                                                                                   presence of filtering
                                                                                                                                                                                                                                                                                                                                                                                                    Preparation of a mash (having enhanced filterability and extract yield after filtration) comprises preparing a mapresence of enzyme activities comprising xylanase of GH filtering to obtain wort.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             08-SEP-2005

endo-1,4-beta-xylanase (EC 3.2.1.8) G2 - Aspergillus oryzae
N;Alternate names: endo-1,3-beta-xylanase G2; xylanase G2
C;Species: Aspergillus oryzae
C;Date: 30-Jun-2001 #sequence_revision 30-Jun-2001 #text_change
C;Accession: JC7577; PC7120
R;Kimura, T.; Suzuki, H.; Furuhashi, H.; Aburatani, T.; Morimot
Blosci. Biotechnol. Biochem. 64, 2734-2738, 2000
A;Title: Molecular cloning, overexpression, and purification of
A;Reference number: JC7577
A;Accession: JC7577
A;Accession: JC7577
A;Cross-references: UNIPROT:Q9HFA4; UNIPARC:UPI000069976; DDBJ
A;Experimental source: strain KBN616
A;Accession: PC7120
A;Accession: PC7120
A;Accession: PC7120
A;Accession: PC7120
A;Cross-references: UNIPARC:UPI0000175A84
C;Comment: This enzyme has strong similarity to other fungal fa
C;Genetics:
A;Gene: xynG2
A;Introns: 100/2
C;Superfamily: endo-1,4-beta-xylanase; endo-1,4-beta-xylanase h
C;Keywords: glycosidase; hydrolase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁

endo-1,4-beta-xylanase (BC 3.2.1.8) IIB (proteinase-sensitive) - fungus (Tz endo-1,4-beta-xylanase IIB
C;Species: Trichoderma viride
C;Date: 27-Jun-1994 #sequence_revision 22-Nov-1996 #text_change 09-Jul-2004
C;Accession: A44595
R;Yaguchi, M.
submitted to the Protein Sequence Database, March 1994
A;Reference number: A44593
A;Accession: A44595
A;Status: preliminary
A;Molecule type: protein
A;Residues: 1-190 <YAG>
A;Cross-references: UNIPROT:Q7M520; UNIPARC:UPI0000172968
C;Function:
A;Description: catalyzes the hydrolysis of 1,4-beta-xylanase homology
C;Keywords: glycosidase; hydrolase; polysaccharide degradation
C;Superfamily: endo-1,4-beta-xylanase; endo-1,4-beta-xylanase homology
C;Keywords: glycosidase; hydrolase; polysaccharide degradation
F;12-190/Domain: endo-1,4-beta-xylanase homology
C;Keywords: glycosidase; Glu #status predicted
F;126-127/Cleavage site: Glu #status predicted
F;127-130/Cleavage site: Glu-Gly (unidentified proteinase) #status predicte

T50601
endo-1,4-beta-xylanase (EC 3.2.1.8) B, secreted [imported] -
N;Alternate names: xylanase B
C;Species: Streptomyces coelicolor
C;Date: 21-Jul-2000 #sequence_revision 21-Jul-2000 #text_cha
C;Accession: T50601
R;Redenbach, M.; Kieser, H.M.; Denapaite, D.; Eichner, A.; C
Mol. Microbiol. 21, 77-96, 1996
A;Title: A set of ordered cosmids and a detailed genetic and
A;Reference number: Z20556; MUID:97000351; PMID:8843436
A;Accession: T50601
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Molecule type: DNA
A;Residues: 1-335 <RED>
A;Cross-references: UNIPROT:Q9RKN6; UNIPARC:UPI00000DC56E; E
A;Experimental source: strain A3(2)
C;Genetics:
A;Gene: xlnB
C;Superfamily: Clostridium endo-1,4-beta-xylanase B; endo-1,
C;Keywords: glycosidase; hydrolase
A;Accession: PS0239
A;Molecule type: protein
A;Residues: 41-71 <SH2>

C; Function:
A; Description: catalyzes the hydrolysis of 1,4-beta-xylosidic A; Pathway: xylan degradation
C; Superfamily: Clostridium endo-1,4-beta-xylanase B; endo-1,4-C; Keywords: extracellular protein; glycosidase; hydrolase; pol F; 1-40/Domain: signal sequence #status predicted <SIG>F; 41-333/Product: endo-1,4-beta-xylanase B #status experiments F; 54-230/Domain: endo-1,4-beta-xylanase homology <XYL>F; 127,217/Active site: Glu #status predicted

Protein Sequence Searches - February 2005

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or members of the public who may encounter UniProt temporary accession numbers.

J. Mol. Biol. 295:581-593(2000).
-!- CATALYTIC ACTIVITY: Endohydrolysis of linkages in xylans.
-!- BIOPHYSICOCHEMICAL PROPERTIES:
Temperature dependence:
Thermostable;
-!- PATHWAY: Xylan degradation.
-!- SIMILARITY: Belongs to the glycosyl h family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PDB; 1PVX; X-ray; A=1-194.
